

## Lichens and lichenicolous fungi from the Retezat Mts and overlooked records for the checklist of Romanian lichens

Jan VONDRAK & Jiří LIŠKA

**Abstract:** VONDRAK, J. & LIŠKA, J. 2013. Lichens and lichenicolous fungi from the Retezat Mts and overlooked records for the checklist of Romanian lichens. – Herzogia 26: 293–305.

Records of 223 taxa of lichens, lichenicolous fungi and non-lichenized but lichen-like fungi are reported from the Retezat Mts, south-western Romania. The list includes 44 taxa new to Romania: *Absconditella pauxilla*, *Acarospora heppii*, *Agonimia gelatinosa*, *Agonimia tristicula*, *Anaptychia bryorum*, *Arthrorhaphis grisea*, *Bacidia illudens*, *Biatoridium monasteriense*, *Buellia uberior*, *Caloplaca arenaria*, *C. cerinelloides*, *C. chrysodeta*, *C. magni-filiī*, *C. saxifragarum*, *C. tirolensis*, *C. velana* var. *schaereri*, *C. xanthostigmoidea*, *Candelariella aggregata* s. l., *C. antennaria*, *Chaenotheca xyloxena*, *Dacampia hookeri*, *Dactylospora urceolata*, *Epilichen scabrosus*, *Fellhanera subtilis*, *Frutidella pullata*, *Gyalecta geoica*, *Illosporium carneum*, *Lecanora cavicola*, *Leptogium teretiusculum*, *Lichenoconium lecanorae*, *Lichenomphalia umbellifera*, *Macentia abscondita*, *Micarea botryoides*, *Mniacea nivea*, *Phaeorrhiza nimbosa*, *Porina arnoldii*, *Protoblastenia terricola*, *Protoparmelia atriseda*, *Protothelenella sphinctrinoidella*, *Psorinia conglomerata*, *Rhagadostoma lichenicola*, *Rhizoplaca melanophthalma*, *Sarea resiniae*, and *Sphaerellothecium minutum*. *Stigmidium aff. cerinae*, lichenicolous on *Lecanora epibryon*, is possibly an undescribed species. Taxonomic comments to identities of our samples are made for *Caloplaca xanthostigmoidea*, *Candelariella cf. aggregata*, *C. antennaria* and *C. plumbea*. In a second part of our paper, we provide additions to the checklist of Romanian lichens from the literature, listing species which lack in both the Catalogue of Lichens in Romania by Ciurchea and Feuerer's lichen checklist of Romania.

**Abstract:** VONDRAK, J. & LIŠKA, J. 2013. Flechten und lichenicole Pilze aus dem Retezat-Gebirge und übersehene Angaben zur Checkliste der Flechten Rumäniens. – Herzogia 26: 293–305.

Funde von 223 Taxa von Flechten, flechtenbewohnenden Pilzen und nicht-lichenisierten, flechtenähnlichen Pilzen werden vom Retezat-Gebirge in Südwest-Rumänien vorgelegt. Darunter sind 44 Taxa, die neu für Rumänien sind: *Absconditella pauxilla*, *Acarospora heppii*, *Agonimia gelatinosa*, *Agonimia tristicula*, *Anaptychia bryorum*, *Arthrorhaphis grisea*, *Bacidia illudens*, *Biatoridium monasteriense*, *Buellia uberior*, *Caloplaca arenaria*, *C. cerinelloides*, *C. chrysodeta*, *C. magni-filiī*, *C. saxifragarum*, *C. tirolensis*, *C. velana* var. *schaereri*, *C. xanthostigmoidea*, *Candelariella aggregata* s. l., *C. antennaria*, *Chaenotheca xyloxena*, *Dacampia hookeri*, *Dactylospora urceolata*, *Epilichen scabrosus*, *Fellhanera subtilis*, *Frutidella pullata*, *Gyalecta geoica*, *Illosporium carneum*, *Lecanora cavicola*, *Leptogium teretiusculum*, *Lichenoconium lecanorae*, *Lichenomphalia umbellifera*, *Macentia abscondita*, *Micarea botryoides*, *Mniacea nivea*, *Phaeorrhiza nimbosa*, *Porina arnoldii*, *Protoblastenia terricola*, *Protoparmelia atriseda*, *Protothelenella sphinctrinoidella*, *Psorinia conglomerata*, *Rhagadostoma lichenicola*, *Rhizoplaca melanophthalma*, *Sarea resiniae* und *Sphaerellothecium minutum*. *Stigmidium aff. cerinae*, ein lichenicoler Pilz auf *Lecanora epibryon*, ist möglicherweise eine bisher unbeschriebene Art. Taxonomische Anmerkungen zur Identität unserer Aufsammlungen werden für *Caloplaca xanthostigmoidea*, *Candelariella cf. aggregata*, *C. antennaria* und *C. plumbea* gemacht. In einem zweiten Teil unseres Artikels stellen wir als Ergänzung zur Checkliste der Flechten Rumäniens Arten aus der Literatur zusammen, die sowohl im Katalog von Ciurchea als auch in Feuerers Checkliste der Flechten Rumäniens fehlen.

**Key words:** Lichenized fungi, alpine biota, biodiversity, Carpathians.

## Introduction

The lichen flora of Romania has been studied during the last two centuries. In the 19<sup>th</sup> century, many lichenologists published papers with records from the territory of Romania, for instance I. Barth, M. Fuss, F. Hazslinszky and H. Lojka. In the 20<sup>th</sup> century, important contributions were published namely by L. Burlacu, M. Ciurchea, V. Codoreanu, P. Cretzoiu, C. Moruzi, G. Sava and Ö. Szatala (see CIURCHEA 1998). Several syntheses of the Romanian lichen flora have been compiled (CRETZOIU 1943 [pyrenocarpous lichens], MORUZI et al. 1967, CIURCHEA 1998, KONDRATYUK et al. 2003 [Eastern Carpathian part]). Unfortunately, a catalogue of the Southern Carpathians, covering large part of Romania is still lacking.

The territory of Romania includes large parts of the Carpathian mountain system. The Retezat Mts are one of the highest mountains in the Southern Carpathians, formed by hard siliceous rocks (in the higher and larger northern part) and limestone (in the southern part called Retezatul Mic). An alpine zone with numerous rocky outcrops is well developed in both parts. The Retezat Mts have one of the best known lichen biota among Romanian mountains; several publications regarding the Retezat Mts are compiled in CIURCHEA (1998), for instance the important licheno-floristic studies by MORUZI & MANTU (1962, 1963).

## Materials and Methods

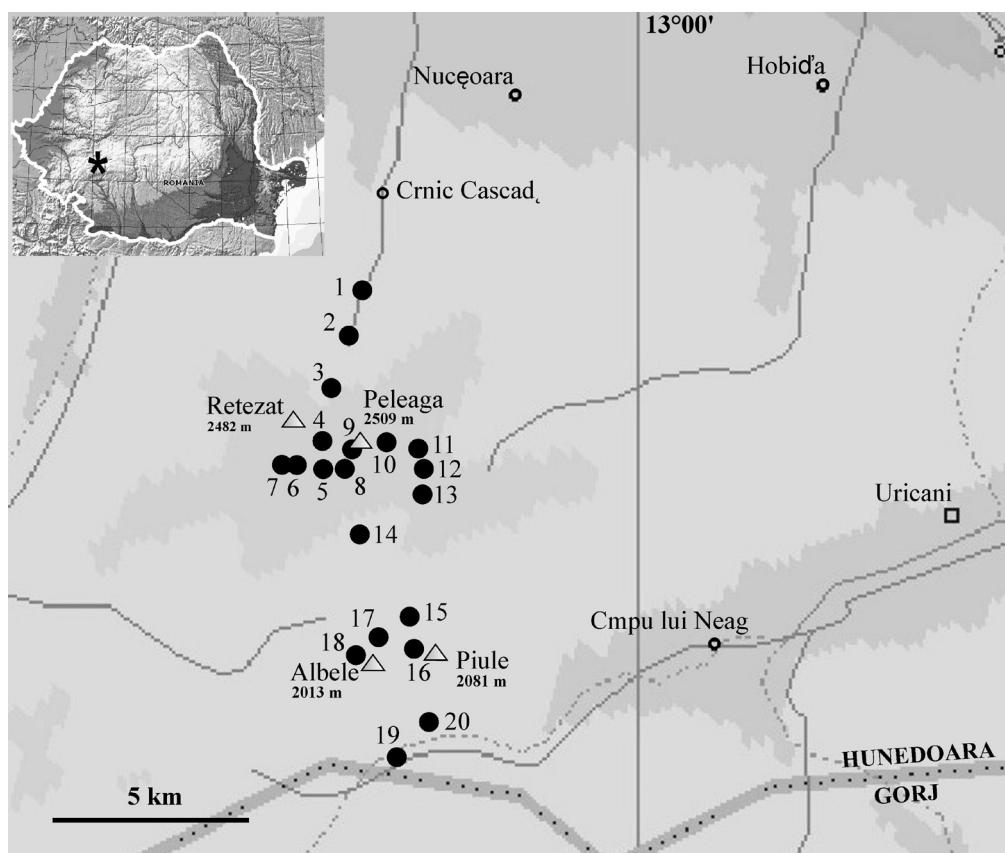

We collected lichens in the Retezat Mts during a field excursion to Romania in June 2005. Sampling sites are shown in Fig. 1. Our sampling was neither systematical nor intensive, but the identification of our samples revealed some little known species and many new records to Romania.

Samples were investigated externally with a stereomicroscope. The anatomical details were observed in tap water mounts with a microscope. Spot tests with KOH and P were frequently applied, TLC was used for identifications of some taxa (eg. *Biatora* spp., *Lecanora cavicola*, *Lepraria* spp.); TLC results are given in the species list.

Herbarium specimens were deposited in the herbarium of the Faculty of Biological Sciences, University of South Bohemia, Czech Republic (CBFS, „JVxxxx“ are accession numbers) and in the herbarium of Jiří Liška (herb. JL).

## Study sites

1. Hațeg, Nucșoara, camping site Pietrele, spruce forest above the camping, 1500–1650 m a.s.l., 22 June 2005.
2. Hațeg, Nucșoara, camping site Pietrele, timber-line of a spruce forest around the hut Gentiana, 1670 m a.s.l., 22 June 2005.
3. Hațeg, Nucșoara, camping site Pietrele, scrubland of *Pinus cembra* and *P. mugo* between the hut Gentiana and the lake Pietrele, 1700–1990 m a.s.l., 22 June 2005.
4. Hațeg, Nucșoara, camping site Pietrele, alpine vegetation around saddle Curmătura Bucurei, c. 2200 m a.s.l., 22 June 2005.
5. Central part of the Retezat Mts, c. 2 km SW of Mt. Peleaga, in alpine zone around the lake Bucura, c. 2050 m a.s.l., 23 June 2005.
6. Central part of Retezat Mts, c. 1 km W of the lake Bucura, in alpine zone around the lake Bucurello, c. 2150 m a.s.l., 23 June 2005.
7. Central part of the Retezat Mts, c. 1.5 km W of the lake Bucura, in alpine zone around the lake Tău Portii, c. 2230 m a.s.l., 23 June 2005.
8. Central part of the Retezat Mts, c. 2 km SW of Mt. Peleaga, in alpine zone, on steep western slope above the lake Bucura, 2150–2200 m a.s.l., 23 June 2005.
9. Central part of the Retezat Mts, SW ridge of Mt. Peleaga, stony debris in alpine zone, 2300–2450 m a.s.l., 24 June 2005.

**Fig. 1:** Position of the Retezat Mts in Romania and location of study sites (numbers correspond with the list of visited sites; see Materials and Methods). Grey triangles represent selected mountain summits.

10. Central part of the Retezat Mts, c. 0.5 km NE of Mt. Peleaga, in alpine zone around the saddle řaua Pelegii, 2300–2450 m a.s.l., 24 June 2005.
11. Central part of the Retezat Mts, c. 2 km E of Mt. Peleaga, in alpine zone around the top of Mt. Păpuša, 2500 m a.s.l., 24 June 2005.
12. Central part of the Retezat Mts, c. 2.5 km E of Mt. Peleaga, in alpine zone in the saddle between Mt. Păpuša and Mt. Păpuša Mică, 2300–2350 m a.s.l., 24 June 2005.
13. Central part of the Retezat Mts, c. 3 km ESE of Mt. Peleaga, in alpine zone around the saddle řaua Custurii, c. 2200 m a.s.l., 24 June 2005.
14. Lupeni, Câmpu lui Neag, Cheile Butii, spruce forest around a camping site on upper stream of the brook Lăpušnicu Mare, below the lake Bucura, 1600–1750 m a.s.l., 25 June 2005.
15. Lupeni, Câmpu lui Neag, Cheile Butii, scrubland of *Pinus mugo* between hills Mt. Buta and Mt. Drăgăsanu, 1950–2080 m a.s.l., 25 June 2005.
16. Lupeni, Câmpu lui Neag, Retezatul Mic Mts, limestone outcrops around Mt. Piule, 1900–2080 m a.s.l., 25 June 2005.
17. Lupeni, Câmpu lui Neag, Retezatul Mic Mts, limestone outcrops around Mt. Albele, 1800–2020 m a.s.l., 26 June 2005.
18. Lupeni, Câmpu lui Neag, Retezatul Mic Mts, limestone outcrops around Mt. Piatra Iorgovanului, 1800–2010 m a.s.l., 26 June 2005.
19. Lupeni, Câmpu lui Neag, Cheile Butii, mixed beech-spruce forest near the camping site Canton silvic Câmpušel, 1100–1200 m a.s.l., 27 June 2005.
20. Lupeni, Câmpu lui Neag, Cheile Butii, in the gorge Cheile Scorota, 1100–1200 m a.s.l., 27 June 2005.

## Species list

Our list contains 223 taxa, including 213 lichens, nine lichenicolous fungi and three not lichenicolous but lichen-like fungi; 44 taxa are new to Romania. New country records are mostly less conspicuous microlichens. Some of them are definitely rare alpine species with a peculiar ecology, e.g. *Caloplaca xanthostigmoidea*, *C. magni-filii*, *Epilichen scabrosus*, and *Phaeorrhiza nimbosa*, but number of the taxa are rather common species; e.g. *Caloplaca arearia*, *Fellhanera subtilis* and *Frutidella pullata*.

\* new to Romania; ! lichenicolous fungus; # non-lichenized but lichen-like fungus.

\**Absconditella pauxilla* Vězda & Vivant: **2**, on wood (herb. JL, det. Z. Palice)

\**Acarospora heppii* (Nägeli) Körb.: **19**, on limestone outcrop (CBFS JV3982)

*Acarospora moenium* (Vain.) Räsänen: **19**, on limestone outcrop with *Acarospora heppii* and *Lecidella stigmatica* (CBFS JV3981)

\**Agonimia gelatinosa* (Ach.) Brand & Diederich: **18**, on calcareous soil (CBFS JV3722)

\**Agonimia tristicula* (Nyl.) Zahlbr.: **16**, on plant debris (CBFS JV3659)

*Alectoria nigricans* (Ach.) Nyl.: **10**, on acid soil, **11**, on acid soil with *A. ochroleuca* (CBFS JV3954, 3974)

*Alectoria ochroleuca* (Hoffm.) A.Massal.: **3**, **11**, on acid soil (CBFS JV3569, 3955)

*Allocetraria madreporeiformis* (Ach.) Kärnefelt & Thell: **18**, on calcareous soil (CBFS JV3613, herb. JL)

\**Anaptychia bryorum* Poelt: **16**, on dead mosses (CBFS JV3664)

*Anzina carneonivea* (Anzi) Scheid.: **15**, on bark of *Pinus mugo* (CBFS JV4163)

*Arthrorhaphis citrinella* (Ach.) Poelt: **5**, on acid soil with *Micarea lignaria*, **9**, on acid soil (herb. JL), **11**, on acid soil (CBFS JV3559, 3895)

\*!*Arthrorhaphis grisea* Th.Fr.: **8**, on shallow acid soil, parasitic on *Baeomyces rufus* (CBFS JV3529)

*Aspicilia caesiocinerea* (Malbr.) Arnold: **6**, on granite rock (CBFS JV3682)

*Aspicilia cinerea* (L.) Körb.: **5**, **6**, **9**, on granite rock (CBFS JV3516, 3591, 3702, 3745, 3757)

*Bacidia bagliettoana* (A.Massal & De Not.) Jatta: **19**, over mosses and on *Peltigera* growing on lime-rich soil (CBFS JV3907)

\**Bacidia illudens* (Nyl.) Lyngé: **16**, on mosses (herb. JL, det. Z. Palice)

*Bacidia subincompta* (Nyl.) Arnold: **20**, on bark of *Fagus sylvatica* (CBFS JV3717)

*Bacidina inundata* (Fr.) Vězda: **14**, on wood partially immersed in brook (CBFS JV3632)

*Baeomyces placophyllus* Ach.: **8**, on shallow acid soil, parasited by *Epilichen scabrosus*, **11**, on acid soil with *Arthrorhaphis citrinella* (CBFS JV3519, 3894, herb. JL)

*Baeomyces rufus* (Huds.) Rabenh.: **8**, on shallow acid soil, parasited by *Arthrorhaphis grisea* (CBFS JV3530)

*Biatora efflorescens* (Hedl.) Räsänen: **2**, on bark of *Picea*, **20**, on bark of *Fagus* (herb. JL, det. Z. Palice)

Note: TLC confirmed argopsin

*Biatora cf. fallax* Hepp: **2**, on bark of *Picea*, **20**, on bark of *Fagus* (herb. JL, det. Z. Palice)

Note: TLC confirmed gyrophoric acid

\**Biatoridium monasteriense* Körb.: **20**, on bark of *Ulmus glabra* (CBFS JV3727, herb. JL)

*Bilimbia lobulata* (Sommerf.) Hafellner & Coppins: **16**, **18**, among mosses on calcareous soil and plant debris (CBFS JV3526, 3677)

*Brodoa intestiniformis* (Vill.) Goward: **5**, on granite rock (CBFS JV3703)

*Bryoria fuscescens* (Gyeln.) Brodo & D.Hawksw.: **17**, on calcareous soil with *Alectoria ochroleuca*, *Flavocetraria cuculata*, and *F. nivalis* (CBFS JV3670)

\**Buellia uberior* Anzi: **7**, on granite rock (CBFS JV3540)

*Calicium trabinellum* (Ach.) Ach.: **14**, on decorticated snag of large spruce with *Chaenotheca trichialis*, *Ch. xyloxena* and *Placynthiella dasaea* (CBFS JV3718)

*Caloplaca amniospila* (Wahlenb.) H.Olivier: 9, very rare on plant debris, 16, common on plant debris and dead twigs (CBFS JV3566, 3575, 3602)

\**Caloplaca arenaria* (Pers.) Müll.Arg.: 6, on granite rock with *Aspicilia caesiocinerea* (CBFS JV3681)

*Caloplaca aurea* (Schaer.) Zahlbr.: 18, on mosses and plant debris with *C. xanthostigmoidea* (CBFS JV3661, herb. JL)

*Caloplaca cerina* s. l.: 18, on wood (herb. JL)

\**Caloplaca cerinelloides* (Erichsen) Poelt: 19, on twigs of *Picea abies* (CBFS JV3585, 3612, 3725, herb. JL)

*Caloplaca citrina* (Hoffm.) Th.Fr.: 19, on small limestone rock (CBFS JV3598)

*Caloplaca herbidella* (Hue) H.Magn.: 20: on bark of *Fagus sylvatica* with *Ramalina farinacea* (CBFS JV3968)

\**Caloplaca chrysodeta* (Vain. ex Räsänen) Dombr.: 19, on shaded overhanged limestone rock (CBFS JV3574)

\**Caloplaca magni-filii* Poelt: 9, parasitic on thallus of cf. *Miriquidica nigroleprosa* on granite rock (CBFS JV3971)

\**Caloplaca saxifragarum* Poelt: 16, 18, on plant debris with *C. sticticidiorum*, *Lecanora hagenii* var. *fallax*, and *Lecania* sp. (CBFS JV3679, 3942, 3948, herb. JL)

*Caloplaca sinapisperma* (Lam. & DC.) Maheu & A.Gillet: 16, on soil and mosses (CBFS JV3696)

*Caloplaca sticticidiorum* (Vahl) Lyngé: 16, 18, on plant debris (CBFS JV3617, 3680, 3943, 3949, herb. JL)

\**Caloplaca tirolensis* Zahlbr.: 16, on plant debris (CBFS JV3938)

\**Caloplaca velana* var. *schaereri* (Arnold) Clauzade & Cl.Roux: 18, on limestone rock (CBFS JV3533)

*Caloplaca xantholyta* (Nyl.) Jatta: 19, on shaded overhanged limestone rock (CBFS JV4001)

\**Caloplaca xanthostigmoidea* (Räsänen) Zahlbr.: 16, 18, on calciphilous mosses *Schistidium* sp. and *Grimmia ovalis* (CBFS JV3643, 3662, 4002)

Notes: In the Retezat Mts, this taxon forms distinct yellow crusts overgrowing cushions of alpine mosses *Grimmia* and *Schistidium*. However, the type of *C. xanthostigmoidea* was collected in Canada from birch bark (WETMORE 2004) and our specimen perhaps represents a different, but morphologically similar taxon. The names *C. epiphyta* (described from the Arctic) and *C. bryochryson* (described from the Alps) possibly better accommodate the specimens from the Retezat Mts, but both are now considered to be synonyms of *C. xanthostigmoidea* (HANSEN et al. 1987, SØCHTING et al. 2008).

Another yellow sorediate *Caloplaca* was found on mosses and plant debris in the Retezat Mts (CBFS JV3619); it forms tiny rounded soralia on an inconspicuous whitish thallus. This unnamed taxon is somewhat similar to *C. chrysophthalma*.

\**Candelariella aggregata* M.Westberg s. l.: 16, 18, on plant debris (CBFS JV3754)

Note: The lichens from the Retezat Mts fit well the concept of *Candelariella unilocularis* sensu Hakulinen (1954), but this name is a synonym to *C. aurella* (e.g. WESTBERG & CLERC 2012). The sample CBFS JV3754 was seen by Westberg in 2006, who considered this specimen to be conspecific with the North American specimens of *C. aggregata*. This taxon has been recently reported from Switzerland (WESTBERG & CLERC 2012). However, WESTBERG & CLERC (2012) also stated that the terricolous specimens with long spores from the Swiss Alps will be described as a new species in a forthcoming paper. We suppose that our samples perhaps belong to this undescribed taxon.

\**Candelariella antennaria* Räsänen: 19, on twigs of *Picea abies* with *Caloplaca* aff. *holocarpa* (CBFS JV3584, 3723)

Note: Although this species was described from South America (RÄSÄNEN 1939), it was later recorded also in North America (WESTBERG 2007) and recently it was recorded several times in Eurasia (references are summarized in YAKOVCHENKO et al. 2012).

*Candelariella coralliza* (Nyl.) H.Magn.: 12, on siliceous rock with *Cornicularia normoerica* and *Miriquidica leucophaea* (CBFS JV3604)

***Candelariella plumbea* sensu Nimis: 16, on limestone rock (CBFS JV3571)**

Note: *Candelariella plumbea* was described from a low altitude in Romanian Dobruja (POELT & VĚZDA 1976) as a species with grey, well developed granulose to squamulose thallus. Such morphotypes are rather common on xerothermic limestone outcrops in dry continental parts of Europe (our data). In the Retezat Mts, however, the lichens have their grey thallus rather reduced to small spots reflecting small depressions or cracks in the substrate. This morphotype fits well the concept of *C. plumbea* in NIMIS & MARTELLOS (2008).

***Candelariella rhodax* Poelt & Vězda: 18, on limestone rock (CBFS JV3663)**

***Candelariella vitellina* (Hoffm.) Müll.Arg.: 11, on siliceous rock (CBFS JV3678, 3693)**

**\**Carbonea vitellinaria* (Nyl.) Hertel: 11, parasitic on *Candelariella vitellina* (CBFS JV3692)**

***Catapyrenium cinereum* (Pers.) Körb.: 18, among mosses on calcareous soil (CBFS JV4152)**

***Catinaria atropurpurea* (Schaer.) Vězda & Poelt: 1, on bark of *Sambucus racemosa* (CBFS JV3553)**

***Cetraria aculeata* (Schreb.) Fr.: 17, on calcareous soil (CBFS JV3673)**

***Cetraria ericetorum* Opiz: 8, on acid soil (CBFS JV3650)**

***Cetraria islandica* (L.) Ach.: 4, on shallow acid soil, 17, on calcareous soil (CBFS JV3675, 3708)**

***Cetraria sepincola* (Ehrh.) Ach.: 3, 8, on twigs of *Rhododendron myrtifolium* (CBFS JV3550, 3621, 3706)**

***Chaenotheca ferruginea* (Turner & Borrer) Mig.: 1, on bark of *Picea abies* (CBFS JV3947)**

***Chaenotheca chrysoccephala* (Turner ex Ach.) Th.Fr.: 1, on bark of *Picea abies*; 14, on wood (CBFS JV3978, herb. JL)**

***Chaenotheca stemonea* (Ach.) Müll.Arg.: 1, on bark of *Picea abies* (CBFS JV3531)**

***Chaenotheca trichialis* (Ach.) Th.Fr.: 1, on bark of *Picea abies*, 14, on decorticated snag of large spruce (CBFS JV3623, 3648, 3720)**

**\**Chaenotheca xyloxena* Nádv.: 14, on decorticated snag of large spruce (CBFS JV3721)**

***Cladonia bellidiflora* (Ach.) Schaer.: 5, on acid soil (CBFS JV3700)**

***Cladonia coniocraea* (Flörke) Spreng.: 1, on rotten stump, 20, on base of *Fagus sylvatica* (CBFS JV3902, 3908)**

***Cladonia deformis* (L.) Hoffm.: 14, on acid soil (CBFS JV3631)**

***Cladonia digitata* (L.) Hoffm.: 14, on acid humus (CBFS JV3649)**

***Cladonia gracilis* (L.) Willd. s. l.: 4, 8, on shallow acid soil (CBFS JV3527, 3690, 3709)**

***Cladonia macropphyllodes* Nyl.: 4, on shallow acid soil (CBFS JV3532, det. Z. Palice)**

Note: common chemotype with fumarprotocetraric acid confirmed by spot test (C+ orange-red).

***Cladonia metacorallifera* Asahina: 3, on acid soil (CBFS JV3731)**

***Cladonia mitis* Sandst.: 17, on calcareous soil (CBFS JV3676)**

***Cladonia pyxidata* (L.) Hoffm.: 5, on acid soil (CBFS JV3951)**

***Cladonia sulphurina* (Michx.) Fr.: 15, on acid humus (CBFS JV3535)**

***Collema auriforme* (With.) Coppins & J.R.Laundon: 20, on mosses (herb. JL)**

***Collema polycarpon* Hoffm.: 16, on limestone rock (herb. JL)**

***Cornicularia normoerica* (Gunnerus) Du Rietz: 12, on siliceous rock (CBFS JV3605)**

**\**Dacampia hookeri* (Borrer) A.Massal.: 18, on calcareous soil, parasitic on *Solorina saccata* (CBFS JV3726, 3962, herb. JL)**

**\**Dactylospora urceolata* (Th.Fr.) Arnold: 16, parasitic on *Caloplaca ammiospila* and *Pannaria pezizoides* (CBFS JV3572, 3686)**

***Dermatocarpon miniatum* (L.) W.Mann: 18, on limestone rock (herb. JL)**

***Dimelaena oreina* (Ach.) Norman: 7, on granite rock (CBFS JV3539)**

***Dimerella pineti* (Ach.) Vězda: 1, on bark of *Picea abies* (CBFS JV3561)**

***Diploschistes gypsaceus* (Ach.) Zahlbr.: 20, limestone (herb. JL)**

**\**Epilichen scabrosus* (Ach.) Clem.: 8, on shallow acid soil, parasitic on *Baeomyces placophyllus* (CBFS JV3518, herb. JL)**

- Evernia divaricata*** (L.) Ach.: **17**, on calcareous soil with *Cetraria nivalis* and *Alectoria ochroleuca* (CBFS JV3657)
- \****Fellhanera subtilis*** (Vězda) Diederich & Sérusiaux: **2, 19**, on leaves and twigs of *Picea abies* (CBFS JV3610, 3712)
- Flavocetraria cucullata*** (Bellardi) Kärnefelt & Thell: **4**, on shallow acid soil, **17**, on calcareous soil (CBFS JV3522, 3672)
- Flavocetraria nivalis*** (L.) Kärnefelt & Thell: **4**, on shallow acid soil, **17**, on calcareous soil (CBFS JV3521, 3671)
- \****Frutidella pullata*** (Norman) Schmull: **8**, on dead twigs of *Rhododendron myrtifolium* (CBFS JV3554)
- Fulgensia bracteata*** (Hoffm.) Räsänen: **16**, on calcareous soil among mosses (CBFS JV3557); **18**, on mosses and calcareous soil (herb. JL)
- Fulgensia schistidii*** (Anzi) Poelt: **18**, among mosses on calcareous soil (CBFS JV3600)
- Fuscidea mollis*** (Wahlenb.) V.Wirth & Vězda: **15**, on granite rock (CBFS JV3524)
- \****Gyalecta geoica*** (Wahlenb. ex Ach.) Ach.: **16**, on calcareous soil (CBFS JV3607, 3984)
- Gyalecta jenensis*** (Batsch) Zahlbr.: **16, 19**, on limestone rock, **18**, on calcareous soil (CBFS JV3738, 3963, 3967)
- Hypogymnia farinacea*** Zopf: **2**, on bark of *Picea abies* (herb JL)
- \****Illosporium carneum*** Fr.: **19**, parasitic on *Peltigera rufescens* and *P. didactyla* (CBFS JV3758, 3905)
- Imshaugia aleurites*** (Ach.) S.L.F.Meyer: **2**, on wood (CBFS JV3669, herb. JL)
- Lecania cyrtella*** (Ach.) Th.Fr.: **19**, on twigs of *Picea abies* (CBFS JV3586, 3735)
- \****Lecanora cavicola*** Creveld: **4**, on overhanged side of large granite boulder (CBFS JV3747, det. Z. Palice)  
Note: TLC confirmed alectorialic acid.

- Xanthoparmelia tinctina* (Maheu & A.Gillet) Hale: **7**, on granite rock (herb JL)
- Xanthoria elegans* (Link) Th.Fr.: **18**, on limestone rock (CBFS JV3599)
- Xylographa parallela* (Ach.) Behlen & Desberg: **14**, on wood (CBFS JV3966, herb. JL)

### Additions to the lichen checklist of Romania from published literature

The most recent version of the lichen checklist of Romania (FEUERER 2011) fully excerpted the Catalog of lichens in Romania (CIURCHEA 1998) and added some recent studies. During our identification work we came across some papers with information on lichen species from Romania, which are listed neither in CIURCHEA (1998) nor FEUERER (2011): ARUP & ÅKELIUS (2009), *Caloplaca herbidella*; BARTÓK et al. (2005), *Lecanora thysanophora*; CALATAYUD & RAMBOLD (1998), *Immersaria mehadiana*; CZARNOTA & KUKWA (2009),

*Vezdaea aestivalis*; ÇOBANOĞLU et al. (2009), *Opegrapha prosodea*, *Parmelia submontana*, *Parmelina pastillifera*, *Phaeophyscia rubropulchra*, *Ramalina canariensis*, *Rimularia furvella*, *Usnea subscabrosa*; ÇOBANOĞLU et al. (2010), *Buellia griseovirens*, *Candelariella coralliza*, *Cladonia stellaris*, *Lecanora cinereofusca*, *Leprolooma cacuminum*, *Ochrolechia inaequatula*, *Trapelia involuta*, *Usnea silesiaca*; DENGLER et al. (2012), *Caloplaca raesenenii*, *Cladonia magyarica*, *Xanthoparmelia perrugata*; FAŁTYNOWICZ & SULMA (1994, incorrectly reported to Ukraine), *Lecanora leptyrides* (sub *L. nemoralis*), *Rinodina capensis* (sub *R. corticola*); GAYA (2009), *Caloplaca arnoldii* subsp. *obliterata*, *C. pusilla*; KUKWA (2011), *Ochrolechia trochophora*; LLOP (2010), *Bacidia punica*; PALICE (1999), *Chaenotheca spherocephala*, *Pycnora leucococca*, *Scoliciosporum curvatum*, *Trapelia corticola*; PIŠÚT (1971), *Caloplaca murorum* var. *laceratula*, *Dermatocarpon arnoldianum*, *Lecanora admontensis*, *Phaeophyscia endophoenicea* (sub *Physcia labrata* var. *endophoenicea*), *P. pusilloides* (sub *Physcia p.*), *Physconia venusta*, *Ramalina obtusata* var. *ventricosa*, *Rhizocarpon saanaënsse* (sub. *R. sublucidum*), *Teloschistes contortuplicatus*; PIŠÚT (1995), *Ochrolechia microstictoides*; *Pycnora sorophora* (sub *Hypocenomyce s.*); PIŠÚT (1999), *Collema subflaccidum*; PIŠÚT (2002), *Caloplaca scrobiculata*, *Collema polycarpon* subsp. *coryrense*, *Lecanora xanthostoma*, *Parmotrema stippeum*, *Polyblastia theleodes*, *Ramalina sinensis*, *Xanthoria isidia*; POELT & VĚZDA (1976), *Candelariella plumbea*, *C. rhodax*; PRINTZEN & PALICE (1999), *Biatora chrysantha*, *B. efflorescens*, *B. ocelliformis*, *B. sphæroidiza*; PRINTZEN et al. (2002), *Cheiromycina flabelliformis*; ŚLIWA (2009), *Lecanora semi-pallida*; TIBELL (1973), *Chaenotheca stemonea*; TOMA & COVALIUC (2006), *Arthopyrenia sphæroides*, *Bacidia scopulicola*, *Lecania turicensis*, *Lecanora cinereofusca*, *Ramalina ligulata*, *Sphaerophorus melanocarpus*; VĚZDA (1960–1991, 1975), *Anaptychia setifera*, *Anzina carneonivea* (sub *Varicellaria c.*), *Aspicilia calcarea* var. *dobrogensis*, *Bellemera cupreoatra* (sub *Lecanora c.*), *Cetraria steppae* (sub *Cornicularia s.*), *Dimelaena griseoviridis*, *Diploschistes actinostomus*, *D. farinosus*, *Hypotrachyna britannica* (sub *Parmelia b.*), *Lecanora casimceana*, *Lichenella nigritella* (sub *Thyrea n.*), *Miriquidica nigroleprosa* (sub *Lecidea n.*), *Physcia leptalea*, *Protoparmelia psarophana* (sub *Lecanora p.*), *Ramalina pontica*, *R. roesleri*, *Solenopsora liparina*, *Xanthoparmelia ryssolea* (sub *Parmelia r.*), *X. tinctina* (sub. *Parmelia t.*), *X. vagans* f. *desertorum* (sub *Parmelia*), *Xanthoria domogledensis*, *X. papillifera*; VONDRAK (2004), *Caloplaca crenulatella*, *Rinodina pityrea*, *Verrucaria macrostoma* f. *furfuracea*; VONDRAK (2010), *Caloplaca albopruinosa*; VONDRAK et al. (2008), *Caloplaca concreticola*; VONDRAK et al. (2009a), *Caloplaca austrocitrina*, *C. dichroa*, *C. limonia*, *C. phlogina*; VONDRAK et al. (2009b), *Caloplaca ulcerosa*; VONDRAK et al. (2012), *Caloplaca skii*; VONDRAK & KOCOURKOVÁ (2008), *Opegrapha vulpina*; YAVUZ & ÇOBANOĞLU (2008), *Catapyrenium squamulosum*, *Phaeophyscia perisidiosa*; ZAMFIR et al. (1998), *Aspicilia (=Acarospora) moenium*, *Phaeophyscia endophoenicea*. ARDELEAN et al. (2013) added about sixty lichen taxa new to Romania; mostly epiphytic species from the Rodney Mts in Eastern Carpathians. We used the sources listed in this paragraph to recognize the taxa new to Romania.

## Acknowledgements

Zdeněk Palice and Jiří Malíček kindly identified some difficult lichen samples. Zdeněk Palice turned our attention to several papers with records from Romania. Markus Hauck kindly translated the abstract into German and improved the text. Our research was supported by the Academy of Sciences of the Czech Republic (long-term research program RVO 67985939) and the Grant Agency of Faculty of Environmental Sciences (CULS, 42900/1312/3114). All support is gratefully acknowledged.
