

Ecology Seminar

WINTER SEMESTER 2024

When

Tuesdays
16:20h

Where

Lecture hall B2
Building B
Branišovská 1760

22.10. Jakub Štenc Department of Botany, Charles University Prague

Pollination from individual pollen grain to the plant-pollinator community and back

29.10. Alena Sucháčková Institute of Entomology, Biology Centre, CAS

Ghosts of the mammoth steppe: Quaternary biogeography of Palearctic butterflies

5.11. Viktoria Ferenc Natural History Museum, Stuttgart, Germany

Performance of and interactions among multiple co-occurring alien and native plants

12.11. Franz Essl Department of Botany and Biodiversity Research, University Vienna, Austria

A synthesis – on the ecology, biogeography and conservation impacts of biological invasions in the Anthropocene

19.11. Eva Kaštovská Department of Ecosystem Biology, USB

How trophic rewilding by large herbivores influences grassland functioning?

26.11. Clara Espinosa del Alba Biodiversity Research Institute IMIB
University of Oviedo, Spain

Seed and germination traits in alpine community ecology

3.12. Jan Roleček Institute of Botany, CAS & Masaryk University, Brno

Evidence for the Holocene continuity of the extremely species-rich peri-Carpathian grasslands

10.12. Jan Altman Institute of Botany, CAS, Trebon

Dendrochronology as a tool in interdisciplinary ecology with a focus on revealing tropical cyclone activity and their impact on forest
